

Rune Terminal — User Guide

Rune is a full Linux-style shell inside Void Walker — no separate Termux app. This guide is for lifetime / family buyers. Support: support@alphaomegatech.net
voidwalker.app · 2026-07-14

1. Open Rune

- Open Void Walker → Rune Term tab
- Wait for the rune\$ prompt
- Prefer one session (S1). Extra sessions (New) are optional.
- Type one command, then press Enter (or Send on the keyboard)

2. First checks

```
vw doctor
vw hosts
vw status
```

vw doctor checks tools, SSH key, and mesh. A WARNING about rsync is normal on Windows PCs (file copy still works with scp).

3. Ways to connect (forms)

- Interactive SSH — full remote shell to hosts you own
- Host profiles — vw hosts then vw ssh <alias>
- LAN or personal mesh (Tailscale) — same login from cellular / hotels
- File transfer — vw put / vw get (scp)
- Mosh (optional) — flaky links if remote has mosh-server (Linux/Pi/WSL)
- Cockpit health — vw doctor · vw control ping / sessions
- On-device only — packages and local tools with no remote host
- Multi-session — S1/S2 tabs; prefer one session for daily use

4. Connect to your PC (example)

With Tailscale (or same Wi-Fi) and SSH set up on your computer:

```
vw hosts
vw ssh atlasrune
exit
```

Short names often include atlasrune, atlas, hub, pc, forge. See in-app Engine → How-to for mesh setup.

5. Move files phone ↔ PC

```
vw put ./note.txt atlasrune:Desktop/  Send a file to your PC
vw get atlasrune:Desktop/file.txt .    Download a file to the phone
vw files help                          More file commands
```

6. Optional mosh

```
vw mosh setup      Install mosh client in Rune
vw mosh help       Honest limits (Windows needs mosh-server in WSL/Linux)
vw mosh <alias>    Connect when remote has mosh-server
```

7. Armor & protection from the shell

```
vw status          Coverage, ArchAngels, Net Shield snapshot
vw cover           Arm Full Armor of God (AUTO COVER)
vw disarm          Turn coverage off
vw void            VOID MODE burst
vw smart on|off    Smart coverage
vw archangel list  Tripwire status
vw shield status   Net Shield
vw help            Full command list
```

8. Sessions (S1 / New / close)

- New opens another shell tab (max 6)
- Tap S1 / S2 to switch
- X closes the active tab and returns to an older one (usually S1)
- Daily use: one session is enough and keeps the phone lighter

9. Health & control helpers

<code>vw doctor</code>	Cockpit health (recommended)
<code>vw control ping</code>	Control path alive
<code>vw control sessions</code>	List open shell tabs
<code>vw control doctor</code>	Same as <code>vw doctor</code>

10. Tips

- One command per Enter — wait for output before the next
- Use the ESC key row for Esc, Ctrl, arrows, and page keys
- Paste button pastes clipboard into the draft line
- Keep your PC powered on for remote SSH / mesh work
- This is the full family app (com.voidwalker.app), not the Play lite build

11. Support
